

Cloud Infrastructure Inventory

Document Purpose

This document provides a high-level overview of the kiya.ai cloud environments, deployment regions, and infrastructure inventory details across different business applications and subscriptions.

1. Cloud Environment Overview

Environment/Application	Subscription/Project	Cloud Provider	Region/Location
ABSA Environment	ABSA Subscription	Microsoft Azure	South Africa North
FATCA Environment	FATCA	Microsoft Azure	UK South
QIB Environment	QIB	Microsoft Azure	UK South
QIB DR	QIB	Microsoft Azure	UK West
BharatMeta Environment	BharatMeta Production	Microsoft Azure	Central India

2. Infrastructure Inventory Summary

2.1 ABSA Environment – South Africa North

Hosting Details

- Cloud Provider: Microsoft Azure
- Azure Region: South Africa North
- Environment Type: Production
- Subscription: ABSA Subscription

Core Infrastructure Components

Resource Type	Details
Virtual Machines	3 Servers (And 1 Firewall server)
SQL Server	1 SQL Server (8 Databases)
Storage Account	1 Storage Account for storing data
Networking	Virtual Networks (VNet), NSG, Load Balancer
Monitoring	Azure Monitor, Site24x7
Backup	24 Hours Daily Backup Policy on Azure
Security	NSG Rules, Access Control, RBAC Roles

Monitoring & Operations

- Azure Monitor enabled for infrastructure monitoring
 - Site24x7 integrated for server and URL monitoring
 - Resource health monitoring enabled
 - Backup and recovery monitoring configured
-

2.2 FATCA Environment – UK South

Hosting Details

- Cloud Provider: Microsoft Azure
- Azure Region: UK South
- Environment Type: Production
- Application: FATCA

Core Infrastructure Components

Resource Type	Details
Virtual Machines	1 Application server and 1 Firewall server
Database Server	1 SQL Server (39 Databases)
Storage	Azure Storage Accounts
Networking	VNet, NSG, Application Connectivity
Monitoring	Azure Monitor, Site24x7
Backup	24 Hours Daily Backup Policy on Azure

Monitoring & Operations

- Continuous infrastructure monitoring enabled
 - Database health monitoring configured
 - Backup validation and recovery checks performed regularly
 - Security policies implemented through Azure networking controls
-

2.3 QIB Environment – UK South (DC and DR)

Hosting Details

- Cloud Provider: Microsoft Azure
- Azure Region (DC): UK South
- Azure Region (DR): UK West
- Environment Type on DC: Production and DEV
- Environment Type on DR: Production Only
- Application: QIB

Core Infrastructure Components

Resource Type	Details
Virtual Machines (DC UK South)	2 Prod Server (APP and WEB) 2 DEV Server (APP and WEB)
Virtual Machines (DR UK West)	2 Prod Server (APP and WEB)
Database	Client Side
Storage	NA
Networking	VNet, NSG, Application Gateway
Monitoring	Azure Monitor, Site24x7
Backup	24 Hours Daily Backup Policy on Azure

Monitoring & Operations

- Centralized monitoring configured on Azure Monitoring Tool and Site 24X7
 - Resource utilization tracking enabled
 - Infrastructure alerting integrated
-

2.4 BharatMeta Production Environment – Central India

Hosting Details

- Cloud Provider: Microsoft Azure
- Azure Region: Central India
- Environment Type: Production and UAT
- Applications: BharatMeta and GIC

Core Infrastructure Components

Resource Type	Details
Virtual Machines	7 Servers (5 Production, 1 UAT, 1 Firewall)
Database Services	1 SQL Server (20 Databases)
Storage	2 Storage Accounts for data storing
Networking	VNet, NSG, Public/Private Connectivity
Monitoring	Azure Monitor, Site24x7
Backup	24 Hours Daily Backup Policy on Azure

Monitoring & Operations

- Production monitoring enabled
 - Infrastructure alerts configured
 - Server performance monitoring enabled
-

3. Cloud Operational Responsibilities

Area	Responsibility
Infrastructure Monitoring	Satish.uduta@kiya.ai Syed.safee@kiya.ai
Backup Monitoring	Satish.uduta@kiya.ai Syed.safee@kiya.ai
Network Monitoring	deepak.ghaskatta@kiya.ai Satish.uduta@kiya.ai
Performance Monitoring	Satish.uduta@kiya.ai Syed.safee@kiya.ai
Incident Management	Satish.uduta@kiya.ai Syed.safee@kiya.ai

4. Notes

- All environments are hosted on Microsoft Azure cloud infrastructure.
- Monitoring and alerting are centralized using Azure-native and third-party monitoring solutions.
- Backup and disaster recovery mechanisms are configured as per operational requirements.
- Environment access is controlled through Azure IAM and network security policies.

5. Document Status

Document Version	Status	Prepared On
v1.0	Initial Draft	May 2026
